

The Great Hall of the Viking Castle, Trelleborg

STAFF SAFETY IN SLAGELSE

Slagelse Municipality with approx. 80,000 inhabitants is located on the west coast of the island of Zealand. Slagelse has since the Viking Ages had a central location in Denmark. The great Viking Castle, Trelleborg, right outside of the city of Slagelse is still today showing the importance of the area.

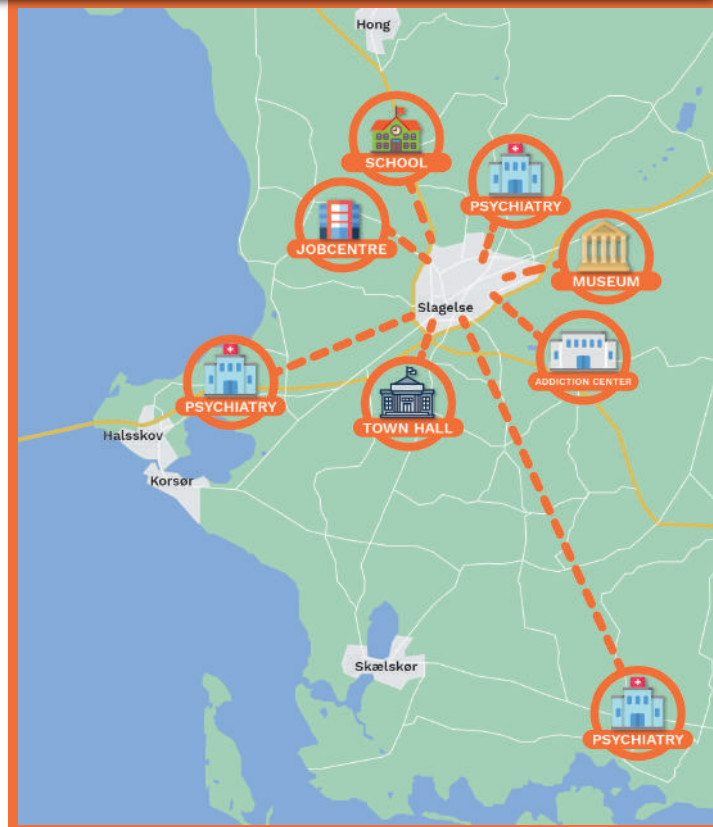

Slagelse Municipality was facing an increasing number of work-related threats towards its employees. The municipality, therefore, decided to install a centralised server solution from ZONITH which should serve the entire municipality and secure the employees effectively.

A centralised ZONITH server providing staff safety to both staff working inside offices as well as staff working outside with the citizens has been installed. This centralised solution is providing staff safety to more than 10 different locations, like the jobcentre, the Town Hall, within psychiatry etc.. The solution is not just a major step towards higher staff safety but is also providing significant cost savings in terms of maintenance costs - compared to other solutions.

For Slagelse, a significant winning factor was the flexibility of the solution.

Easy integration and the ability to continuously adding new institutions to the system when needed.

Furthermore, ZONITH panic alerting devices had a significant impact on the employees, who are now equipped with discreet and advanced products that ensure that the employees are well-protected at all times. Their confidence concerning security - before going to work - is now intact.

PSYCHIATRY

The system offers a seamless transition between working indoors and outdoors and do not require any additional effort from the users. They can focus on their daily tasks and act only when an emergency arises.

Pressing a button on one of our panic alerting devices will immediately notify the closest personnel ready to assist with detailed information about the person in danger and the exact location of the incident.

Staff working outside pressing their panic button will immediately notify Jysk Kontrol Central which is a 24/7 operated emergency control service. From the control room, local guards or the police can be asked to assist the employee in danger.

JOBCENTER

ZONITH SAFETY DEVICES

No matter what happens, Slagelse Municipality has now a system that protects its staff in distressed situations. With ZONITH advanced system, buildings and staff can be equipped with mountable and wearable discrete panic buttons, like the ID Badge with a built-in panic button, that works both inside and outside of buildings.

KEY BENEFITS

- One central solution monitoring all staff safety alarms in the municipality.
- Less distressed situations as the staff discretely can call for assistance before the situation gets serious.
- Central server with low maintenance costs.
- Flexibility - the system covers multiple job sectors maintained by the municipality.
- Scalable solution - adding new buildings/locations is smooth, easy and quick.

"It always costs a bit of money to start saving money. To reduce the negative effect of work-related distress, Slagelse Municipality selected the centralised server from ZONITH as it compared to our existing solutions introduced much higher flexibility but also reduced operational costs. The solution ensures that we can reduce sick leave days and increase job satisfaction levels."

Kasper Nygaard Petersen, Risk Coordinator at Slagelse Municipality
