

CASE STORY WIRELESS PANIC BUTTON

Copenhagen Employment Centre

Denmark's capital city of Copenhagen operates a number of employment centers throughout the city.

Their large, multi-story facilities throughout Copenhagen have numerous counsellors, small security teams and a large number of people in and out of their buildings throughout the day. Zonith's panic button solution provides a quick way to summon help should a dangerous situation arise.

The solution takes advantage of wireless alarm buttons in every room. The wireless buttons send alarms to receiving boxes which are connected to a LAN network. Combined with the ZONITH Alarm Control System it becomes a highly sophisticated panic alarm call system. It auto dispatches alarms, which gets the alarms to the right people at the right time.

Zonith's Alarm Control System (ACS)

This solution ensures that alarms are sent to the appropriate security guards based on their location, work schedule and competency.

Key Benefits

- Discreet alarming. Alarm buttons are attached to the underside of the desk or mounted on walls.
- Fast Reaction Time. Security personnel receives panic alarms within seconds.
- Easy Installation and easy administration.
- Long battery life time.

"Employees feel much safer, knowing they can call help without the clients noticing"

Leif Møller, Managing Security Guard
