

## LONE-WORKER PROTECTION

## LONE-WORKER PROTECTION BENEFITS

### Ensure Lone Worker Safety

ZONITH Lone-Worker protection solution (L-W) monitors people by sending "Alive-Check" messages to their digital radio or SmartPhone. If a person for any reason can't reply L-W will immediately notify support staff and ensure that action is taken. With the ZONITH Lone-Worker protection service, staff are assured that their safety is been monitored even if their radio or SmartPhone fails or is out of coverage.

### Flexible and Scalable

L-W allows you to start small and helps you to develop your lone worker policy without the need to purchase additional hardware as it run on both Android SmartPhones, professional digital radios and GSM devices. The L-W protection solution is a tool-kit that allows companies to create user profiles and ensures that the entire workforce is protected when they need it most.

### Automatic activation of the Lone-Worker protection

The L-W protection solution can be automatically activated based on the time or on your staffs current location. L-W works in conjunction with ZONITH Real Time Location System (RTLS) inside buildings via the Bluetooth indoor positioning system and outside via GPS positioning. Safe Areas can be defined in the RTLS and when a person exits a Safe Area L-W automatically activates. When the person returns to the Safe Area the service will automatically cease.

### Significant Cost Saving

L-W can simultaneously support digital radios like TETRA and MOTOTRBO DMR, Android SmartPhones and even different GSM based devices. A single centralised installation will automatically activate and deactivate Lone-Worker services across your entire work force. The solution operates automatically 24x7 and eliminate recurring charges to manned control room services.

## LONE-WORKER PROTECTION

### Scheduler

L-W can be configured to automatically turn on/off during the day or night. This feature can be configured for individuals or to support larger groups of lone workers.

### Alive Check

L-W 'Alive Check' messages can be sent with any interval. Lone workers have a fixed amount of time in which to respond. If they fail to respond an alarm is immediately raised to the support staff.

### Retry Option

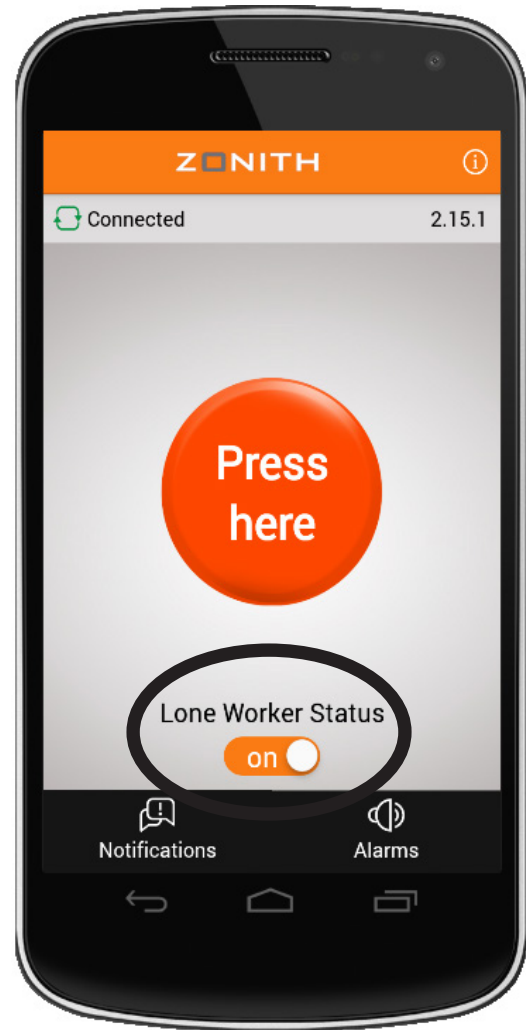

Lone workers need flexibility and can't always respond even when safe. The 'Retry' feature gives users the option to wait for the next 'Alive Check' without triggering an alarm.

### Administrator access

L-W is a password protected software application installed on a single central computer accessible using any web browser. L-W messages can be defined and easily changed by the administrator guaranteeing that only the right people are responding.

### Alarm Escalation

In the event that a staff working alone fails to respond to an 'Alive Check' message L-W will automatically escalate the alarm notification to ensure action is taken.

## ABOUT ZONITH

ZONITH is a manufacturer of solutions for Alarm Handling, Positioning and Staff Safety. Based in Copenhagen with offices in London and Warsaw, ZONITH enhances the safety of thousands of people every day.
