

LONE-WORKER PROTECTION

LONE-WORKER PROTECTION BENEFITS

Ensure Lone Worker Safety

ZONITH Lone-Worker protection solution (L-W) monitors people by sending "Alive-Check" messages to their or SmartPhone. If a person for any reason can't reply L-W will immediately notify support staff and ensure that action is taken. With the ZONITH Lone-Worker protection service, staff are assured that their safety is been monitored even if their radio or SmartPhone fails or is out of coverage.

Flexible and Scalable

L-W allows you to start small and helps you to develop your lone worker policy without the need to purchase additional hardware as it run on both Android and iOS SmartPhones. The L-W protection solution is a tool-kit that allows companies to create user profiles and ensures that the entire workforce is protected when they need it most.

Automatic activation of the Lone-Worker protection

The L-W protection solution can be automatically activated based on the time or on your staffs current location. L-W works in conjunction with ZONITH Real Time Location System (RTLS) inside buildings via the Bluetooth indoor positioning system and outside via GPS positioning. Safe Areas can be defined in the RTLS and when a person exits a Safe Area L-W automatically activates. When the person returns to the Safe Area the service will automatically cease.

Additional Features

- Adding extra info about the job to responders in case of injury
- Large panic button for immediately assistance call
- Notification if out of coverage
- Battery monitoring
- Self-test button

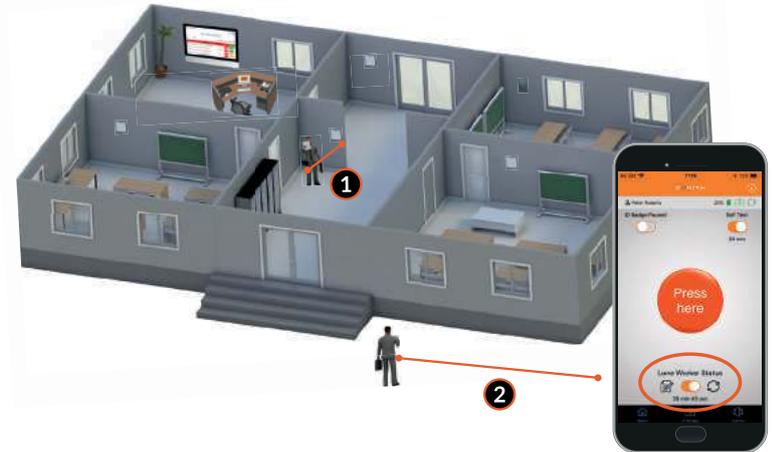

LONE-WORKER PROTECTION

First of all, let's imagine that when you work alone, you get injured and you are prevented from calling for the assistance!

ZONITH's lone-worker App automatically calls for assistance, whenever you are not able to do so yourself. The service checks periodically if you are OK and if you do not acknowledge, it calls for assistance on your behalf.

All you need is a Smartphone with the ZONITH's app installed. The Smartphone will periodically send alerts to ask you if you are OK. If you are OK, simply press the acknowledge button. When you are unable to acknowledge, just wait and the lone-worker service will automatically call for assistance.

In many working environments, it may be impossible to acknowledge the alert from the SmartPhone screen itself. By connecting ZONITH's ID Badge to the Smartphone it is now easier to acknowledge Lone Worker alerts with a double click of the ID Badge instead!

- 1** INDOOR - ZONITH ID BADGE connected to our BT Receiver using Bluetooth communication positioning
- 2** OUTDOOR - Smartphones using ZONITH App sending your GPS position constantly

ZONITH ID BADGE connects to SmartPhone
