

SMART TICKET FOR MOTOTRBO RADIOS

The easy way to handle tasks and alarms on a MOTOTRBO radio

Let's face it – usability on a radio has never been particularly optimal, compared to modern devices like Smartphones or Tablets the usability of a radio can fall behind.

ZONITH is now taking usability to the next level by introducing the Smart Tickets for Motorola MOTOTRBO radios. Smart Tickets is an app loaded onto the Generic Option Board (GOB) of a MOTOTRBO radio. With the Smart Ticket app, radio users no longer need to handle alarms and tasks in blindness.

Smart Ticket for MOTOTRBO radios works perfectly well in environments where users also have Androids running the ZONITH App installed, or where they have installed the ZONITH Alarm Display in their control room.

FUNCTIONALITY

The Smart Ticket App presents alarms and tasks in clear text on the display of all alerted radios.

Once the message is read on a radio, the user is given the choice of accepting, declining or cancelling the alarm or task.

FUNCTIONALITY (CONT'D)

When a task is accepted, the other radios which have received the same message are updated in the background and the task or alarm is removed from their ticket list. This way misunderstandings about if who has signed up for a particular task will be avoided.

Ticket status auto updates on all radios

Customizable features such as alarm tones, keypad shortcuts, and the ability to delete all tickets at once are available as standard features in the Smart Ticket solution.

NOTE: Motorola MOTOTRBO™ standard job tickets cannot update their status on other radios when a user accepts or rejects a task! Users have no indication if tickets are accepted, resolved, or closed by other users. ZONITH's Smart Ticket can solve this problem.
